

ARE YOU TIRED OF THOSE UGLY ROOF STAINS?

1. **The black discoloration of your roof is not dirt. It's algae, spread by airborne spores, combined with mildew and fungus.**
2. **The alga needs three things to survive and flourish moisture, heat, and nutrition. The nutrition comes from the limestone fillers in the shingles themselves.**
3. **We do not use pressure washing, as this will do more harm to the roof than the algae will.**
4. **We use a gentle spray that we lay down on the roof, and wash off with water from a hose.**
5. **The chemical used actually kills and safely removes the algae, mold, and mildew discoloring.**
6. **Our cleaning method kills and eradicates the algae and it's roots.**
7. **The roof will stay clean from 2 to 5 years.**
8. **It will bring the reflective quality back to your roof, enabling your roof to reflect heat better and allowing your air conditioner to work more efficiently.**

ROOF CLEANING WITHOUT HARMFULL
POWER WASHING.
